Frequency Information

Our schedule gives shortwave frequencies in kHz. If your radio tuning dial is in MHz divide the figures in kHz by 1000, e.g 15540 kHz = 15.540 MHz.

Each language is 'beamed' to give the strongest signal where it is needed most, so you may have difficulty if you live outside that area. Shortwave frequencies may have to be changed at short notice because of interference, etc.

If you cannot find us on the stated frequency, try tuning nearby on either side. Information is correct at time of going to print.
